

1. Record Nr.	UNINA9910437800503321
Titolo	Advances in elastomers II Composites and nanocomposites / / P.M. Visakh
Pubbl/distr/stampa	Berlin ; ; New York, : Springer, c2013
ISBN	3-642-20928-9
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (x, 428 pages) : illustrations (some color), portraits
Collana	Advanced structures materials, , 1869-8433 ; ; v. 12
Altri autori (Persone)	VisakhP. M
Disciplina	678
Soggetti	Elastomers Composite materials Nanocomposites (Materials)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"ISSN: 1869-8433." "ISSN: 1869-8441 (electronic)."
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Recent Advances in Elastomers: Their composites and nanocomposites -- Elastomer Macrocomposites -- Elastomer Microcomposites -- Elastomer Nanocomposites -- Interphase modification and compatibilisation of rubber based composites -- Fully green elastomer composites -- Elastomers based bionanocomposites -- Elastomeric micro and nanocomposites for tire engineering: Past, Present and Future -- Bio-medical applications of elastomers, their blends, IPNs and composites -- Other applications -- Life cycle analysis of Their Composites and Nanocomposites.
Sommario/riassunto	This is a two volume work which summarizes in an edited format and in a fairly comprehensive manner many of the recent technical research accomplishments in the area of elastomers. Elastomers having immense structural possibilities for chemical and mechanical modifications to generate novel properties, functions and applications especially in tire and engineering areas. The books discuss the various attempts reported on solving these problems from the point of view of the chemistry and the structure of elastomers, highlighting the drawbacks and advantages of each method. They summarize the importance of elastomers and their multiphase systems in human life and industry, and covers all the topics related to recent advances in

elastomers, their blends, IPNs, composites and nanocomposites. The first volume focuses on advances on the blends and interpenetrating networks (IPNs) of elastomers while the second volume deals with composites and nanocomposites of elastomers.
