1. Record Nr. UNINA9910437822103321

Autore	Wu Peng
Titolo	MWW-type titanosilicate : synthesis, structural modification and catalytic applications to green oxidations / / Peng Wu, Hao Xu, Le Xu, Yueming Liu, Mingyuan He
Pubbl/distr/stampa	Heidelberg [Germany] : , : Springer, , 2013
ISBN	3-642-39115-X
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (viii, 125 pages) : illustrations (some color)
Collana	SpringerBriefs in Green Chemistry for Sustainability, , 2212-9898
Disciplina	541
Soggetti	Silicates Zeolites Green chemistry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"ISSN: 2212-9898."
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Introduction -- Synthesis of Ti-MWW zeolite -- Post-synthesis modification of Ti-MWW: a door to diversity -- Catalytic properties of Ti-MWW in selective oxidation reactions -- Conclusions and Prospects.
Sommario/riassunto	This book provides a comprehensive review of a new generation of selective oxidation titanosilicate catalysts with the MWW topology (Ti-MWW) based on the research achievements of the past 12 years. It gives an overview of the synthesis, structure modification and catalytic properties of Ti-MWW. Ti-MWW can readily be prepared by means of direct hydrothermal synthesis with crystallization-supporting agents, using dual-structure-directing agents and a dry-gel conversion technique. It also can be post-synthesized through unique reversible structure transformation and liquid-phase isomorphous substitution. The structural conversion of Ti-MWW into the materials usable for processing large molecules is summarized. Taking advantage of the structure diversity of the lamellar precursor of Ti-MWW, it can be fully or partially delaminated, and undergo interlayer silylation to obtain a novel structure with larger porosity. In the selective oxidation (alkene epoxidation and ketone/aldehyde ammoxidation) with hydrogen peroxide or organic peroxide as an oxidant, the unique catalytic properties of Ti-MWW are described in comparison to

conventional titanosilicates such as TS-1 and Ti-Beta.
