

1. Record Nr.	UNINA9910437824603321
Titolo	Tetraspanins / / Fedor Berditchevski, Eric Rubinstein, editors
Pubbl/distr/stampa	Dordrecht ; ; New York, : Springer, c2013
ISBN	978-94-007-6070-1
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (422 p.)
Collana	Proteins and cell regulation ; ; v.9
Altri autori (Persone)	BerditchevskiFedor RubinsteinEric
Disciplina	572/.696
Soggetti	Membrane proteins Eukaryotic cells
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Foreword -- 1 Structural Bases for Tetraspanin Functions -- 2 The Evolution of Tetraspanins Through a Phylogenetic Lens -- 3 Organisation of the Tetraspanin Web -- 4 Dynamic Partitioning of Tetraspanins Within Plasma Membranes -- 5 Tetraspanins as Regulators of Protein Trafficking -- 6 The Role of Tetraspanins in Cell Migration and Intercellular Adhesion -- 7 Genetic Evidence for Tetraspanin Functions -- 8 Tetraspanins in Lower Eukaryotes -- 9 The Role of Tetraspanin Complexes in Egg-Sperm Fusion -- 10 Tetraspanins and Immunity -- 11 Tetraspanins in Cancer -- 12 Uroplakins as Unique Tetraspanin Networks -- 13 Essential Tetraspanin Functions in the Vertebrate Retina -- 14 The Role of CD81 in HCV and Plasmodium Infection -- 15 Tetraspanins as Facilitators of Viral and Cellular Information Transfer -- Index.
Sommario/riassunto	Tetraspanin proteins have recently emerged as a new class of modulators of various processes involving cell surface receptors, including cell migration and invasion, host immune responses, cell-cell fusion, and viral infection. The book summarises recent advances in the fields of biology in which the role of tetraspanins have been established and also covers the molecular evolution of the tetraspanin superfamily and structural aspects of the organisation of tetraspanin microdomains.
