Sommario/riassunto	African Ethnobotany in the Americas provides the first comprehensive examination of ethnobotanical knowledge and skills among the African Diaspora in the Americas. Leading scholars on the subject explore the complex relationship between plant use and meaning among the descendants of Africans in the New World. With the aid of archival and field research carried out in North America, South America, and the Caribbean, contributors explore the historical, environmental, and political-ecological factors that facilitated/hindered transatlantic ethnobotanical diffusion; the role of Africans as active agents of plant and plant knowledge transfer during the period of plantation slavery in the Americas; the significance of cultural resistance in refining and redefining plant-based traditions; the principal categories of plant use that resulted; the exchange of knowledge among Amerindian, European and other African peoples; and the changing significance of African-American ethnobotanical traditions in the 21st century. Bolstered by abundant visual content and contributions from renowned experts in

the field, African Ethnobotany in the Americas is an invaluable resource for students, scientists, and researchers in the field of ethnobotany and African Diaspora studies.
