Record Nr.	UNINA9910437835903321
Titolo	Animal Communication and Noise / / edited by Henrik Brumm
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2013
ISBN	3-642-41494-X
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (452 p.)
Collana	Animal Signals and Communication, , 2197-7305 ; ; 2
Disciplina	591.594
Soggetti	Behavioral sciences Animal physiology Neurobiology Evolutionary biology Noise control Behavioral Sciences Animal Physiology Evolutionary Biology Noise Control
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
	Includes bibliographical references at the end of each chapters and

1.

and speciation. However, one often neglected aspect is that signal exchange in every modality is constrained by noise, be it in the transmission channel or in the nervous system. This book analyses whether and how animals can cope with such constraints, and explores the implications that noise has for our understanding of animal communication. It is written by leading biologists working on different taxa including insects, fish, amphibians, lizards, birds, and mammals. In addition to this broad taxonomic approach, the chapters also cover a wide array of research disciplines: from the mechanisms of signal production and perception, to the behavioural ecology of signalling, the evolution of animal communication, and conservation issues. This volume promotes the integration of the knowledge gained by the diverse approaches to the study of animal communication and, at the same time, highlights particularly interesting fields of current and future research.
