Sommario/riassunto	The rise of the welfare state threatens the autonomy and survival of nonprofit voluntary agencies as providers of social services. Or does it? In this cross-national, empirical study of the workings of voluntary agencies, Ralph M. Kramer cuts through the conceptual confusion surrounding voluntarism and the boundaries between the public and private sectors. He draws on a survey of voluntary agencies helping disabled people in four welfare democracies (the United States, England, Israel, and the Netherlands) to explain the virtues and flaws of different patterns of government-voluntary relationships in coping with

the growing demand for human services. Kramer concludes that many of the most cherished beliefs about the voluntary sector have little basis in fact. The most innovative agencies, for example, are not the smallest, but rather among the largest, most bureaucratized, and most professionalized. Government funding does not necessarily constrain agency autonomy. And giving voluntary agencies the primary responsibility for social services can reduce, not increase, citizen participation. This comparative analysis of the distinctive competence, vulnerability, and potential of the voluntary agency should replace some of the myths that guide public policy and the day-to-day activities of social service agencies. Sommario/riassunto	Zoo Animal Welfare thoroughly reviews the scientific literature on the welfare of zoo and aquarium animals. Maple and Perdue draw from the senior author's 24 years of experience as a zoo executive and international leader in the field of zoo biology. The authors' academic training in the interdisciplinary field of psychobiology provides a unique perspective for evaluating the ethics, practices, and standards of modern zoos and aquariums. The book offers a blueprint for the implementation of welfare measures and an objective rationale for their widespread use. Recognizing the great potential of zoos, the authors have written an inspirational book to guide the strategic vision of superior, welfare-oriented institutions. The authors speak directly to caretakers working on the front lines of zoo management, and to the decision-makers responsible for elevating the priority of animal welfare in their respective zoo. In great detail, Maple and Perdue demonstrate how zoos and aquariums can be designed to achieve optimal standards of welfare and wellness.
