1.	Record Nr.	UNINA9910437849303321
	Titolo	Cancer Genomics [[electronic resource]] : Molecular Classification, Prognosis and Response Prediction / / edited by Ulrich Pfeffer
	Pubbl/distr/stampa	Dordrecht : , : Springer Netherlands : , : Imprint : Springer, , 2013
	ISBN	1-299-40862-1 94-007-5842-1
	Edizione	[1st ed. 2013.]
	Descrizione fisica	1 online resource (590 p.)
	Disciplina	616.994042 616.99404227
	Soggetti	Cancer research Gene expression Microarrays Molecular biology Medicine Cancer Research Gene Expression Molecular Medicine Biomedicine, general
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Description based upon print version of record.
	Nota di bibliografia	Includes bibliographical references and index.
	Nota di contenuto	Preface -- Genomic Pathology of Lung Cancer -- Understanding Melanoma Progression by Gene Expression Signatures -- Prognostic testing in uveal melanoma -- Capturing and Deciphering the Molecular Signatures of Head and Neck Cancer -- Predictive and Prognostic Biomarkers for Colorectal Cancer -- Expression Profiling of Hepatocellular Carcinoma -- Kidney Cancer Genomics: Paving the Road to a New Paradigm of Personalized Medicine -- 8 Pancreatic cancer genomics -- Breast Cancer Genomics: From Portraits to Landscapes -- Genomic landscape of ovarian cancer -- Genetics of Endometrial Carcinoma -- Usefulness of molecular biology in follicular-derived thyroid tumors - From translationnal research to clinical practice -- Sarcomas Genetics: From point mutation to complex karyotype, from

diagnosis to therapies -- Novel molecular acquisitions in leukemias -- Where do we stand in the genomics of lymphomas?- The Genomics of Multiple Myeloma and Its Relevance in the Molecular Classification and Risk Stratification of the Disease -- Index.

| Sommario/riassunto | The combination of molecular biology, engineering and bioinformatics has revolutionized our understanding of cancer revealing a tight correlation of the molecular characteristics of the primary tumor in terms of gene expression, structural alterations of the genome, epigenetics and mutations with its propensity to metastasize and to respond to therapy. It is not just one or a few genes, it is the complex alteration of the genome that determines cancer development and progression. Future management of cancer patients will therefore rely on thorough molecular analyses of each single case. Through this book, students, researchers and oncologists will obtain a comprehensive picture of what the first ten years of cancer genomics have revealed. Experts in the field describe, cancer by cancer, the progress made and its implications for diagnosis, prognosis and treatment of cancer. The deep impact on the clinics and the challenge for future translational research become evident. . |
