

1.	Record Nr.	UNISALENTO991004308223507536
	Autore	Fierens, Paul
	Titolo	Le «Groupe du Lundi» Belge et son dernier manifeste / Paul Fierens
	Pubbl/distr/stampa	[S.l. : s n.], 1937
	Descrizione fisica	[169]-171; 25 cm
	Lingua di pubblicazione	Francese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Estr. da: Rassegna di studi francesi - v. 15, n. 4-5, 1937
2.	Record Nr.	UNINA9910437900903321
	Autore	Novotny Antonio Andre
	Titolo	Topological derivatives in shape optimization / / Antonio Andre Novotny and Jan Sokoowski
	Pubbl/distr/stampa	New York, : Springer, 2013
	ISBN	1-283-93548-1 3-642-35245-6
	Edizione	[1st ed. 2013.]
	Descrizione fisica	1 online resource (422 p.)
	Collana	Interaction of mechanics and mathematics, , 1860-6245
	Altri autori (Persone)	SokoowskiJan
	Disciplina	005.4/3
	Soggetti	Shape theory (Topology)
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Description based upon print version of record.
	Nota di bibliografia	Includes bibliographical references and index.
	Nota di contenuto	Domain Derivation in Continuum Mechanics -- Material and Shape Derivatives for Boundary Value Problems -- Singular Perturbations of Energy Functionals -- Configurational Perturbations of Energy Functionals -- Topological Derivative Evaluation with Adjoint States -- Topological Derivative for Steady-State Orthotropic Heat Diffusion Problems -- Topological Derivative for Three-Dimensional Linear Elasticity Problems -- Compound Asymptotic Expansions for Spectral

Sommario/riassunto

The topological derivative is defined as the first term (correction) of the asymptotic expansion of a given shape functional with respect to a small parameter that measures the size of singular domain perturbations, such as holes, inclusions, defects, source-terms and cracks. Over the last decade, topological asymptotic analysis has become a broad, rich and fascinating research area from both theoretical and numerical standpoints. It has applications in many different fields such as shape and topology optimization, inverse problems, imaging processing and mechanical modeling including synthesis and/or optimal design of microstructures, sensitivity analysis in fracture mechanics and damage evolution modeling. Since there is no monograph on the subject at present, the authors provide here the first account of the theory which combines classical sensitivity analysis in shape optimization with asymptotic analysis by means of compound asymptotic expansions for elliptic boundary value problems. This book is intended for researchers and graduate students in applied mathematics and computational mechanics interested in any aspect of topological asymptotic analysis. In particular, it can be adopted as a textbook in advanced courses on the subject and shall be useful for readers interested in the mathematical aspects of topological asymptotic analysis as well as in applications of topological derivatives in computational mechanics.
