

1. Record Nr.	UNINA9910437924803321
Autore	Abrate Serge <1953->
Titolo	Dynamic Failure of Composite and Sandwich Structures [[electronic resource] /] / edited by Serge Abrate, Bruno Castanié, Yapa D. S. Rajapakse
Pubbl/distr/stampa	Dordrecht : , : Springer Netherlands : , : Imprint : Springer, , 2013
ISBN	1-283-91198-1 94-007-5329-2
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (645 p.)
Collana	Solid Mechanics and Its Applications, , 0925-0042 ; ; 192
Disciplina	620.118
Soggetti	Mechanics Mechanics, Applied Ceramics Glass Composites (Materials) Composite materials Solid Mechanics Ceramics, Glass, Composites, Natural Materials Classical Mechanics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Preface -- Hydroelastic Impacts of Deformable Wedges -- Blast Loading of Sandwich Structures and Composite Tubes -- Interaction of Underwater Blasts and Submerged Structures -- Compressively Prestressed Navy Relevant Laminated and Sandwich Composites Subjected to Ballistic Impact -- Development of a Test to Simulate Wave Impact on Composite Sandwich Marine Structure -- Damage Mechanisms and Energy Absorption in Composite Laminates Under Low Velocity Impact Loads -- Perforation of Composite Laminate Subjected to Dynamic Loads -- Discrete Impact Modeling of Inter- and Intra-laminar Failure in Composites -- High Velocity Hail Impact on Composite Laminates -- Modelling and Testing -- Discrete Modeling of the Crushing of Nomex Honeycomb Core and Application to Impact and Post-impact Behavior

of Sandwich Structures -- Foldcore Sandwich Structures and Their Impact Behaviour: An Overview; Experimental and Numerical Study of Normal and Oblique Impacts on Helicopter Blades -- Energy Absorbing Sacrificial Structures Made of Composite Material for Vehicle Crash Design -- Composites and Dynamic Failures: Experimental and Numerical Solving Strategies and Solutions.

Sommario/riassunto

This book presents a broad view of the current state of the art regarding the dynamic response of composite and sandwich structures subjected to impacts and explosions. Each chapter combines a thorough assessment of the literature with original contributions made by the authors. The first section deals with fluid-structure interactions in marine structures. The first chapter focuses on hull slamming and particularly cases in which the deformation of the structure affects the motion of the fluid during the water entry of flexible hulls. Chapter 2 presents an extensive series of tests underwater and in the air to determine the effects of explosions on composite and sandwich structures. Full-scale structures were subjected to significant explosive charges, and such results are extremely rare in the open literature. Chapter 3 describes a simple geometrical theory of diffraction for describing the interaction of an underwater blast wave with submerged structures. The second section addresses the problem of impact on laminated composite structures with chapters devoted to ballistic impacts on pre-stressed composite structures, tests developed to simulate dynamic failure in marine structures, damage mechanisms and energy absorption in low velocity impacts, perforation, the numerical simulation of intra and inter-ply damage during impact, and hail impact on laminated composites. Sandwich structures with laminated facings are considered in Section 3 with chapters dealing with the discrete modeling of honeycomb core during the indentation of sandwich structures, the behavior of fold core sandwich structures during impact, and impact on helicopter blades. The fourth section consists of two chapters presenting experimental results and numerical simulation of composite structures subjected to crash. This volume is intended for advanced undergraduate and graduate students, researchers, and engineers interested and involved in analysis and design of composite structures. .
