Ethnic loss and the future of Crypto-Jewish culture
Sommario/riassunto	This study of contemporary crypto-Jews-descendants of European Jews forced to convert to Christianity during the Spanish Inquisition-traces the group's history of clandestinely conducting their faith and their present-day efforts to reclaim their past. Janet Liebman Jacobs masterfully combines historical and social scientific theory to fashion a brilliant analysis of hidden ancestry and the transformation of religious and ethnic identity.

This collection of papers takes linguists to the leading edge of techniques in generative lexicon theory, the linguistic composition methodology that arose from the imperative to provide a compositional semantics for the contextual modifications in meaning that emerge in real linguistic usage. Today's growing shift towards distributed compositional analyses evinces the applicability of GL theory, and the contributions to this volume, presented at three international workshops (GL-2003, GL-2005 and GL-2007) address the relationship between compositionality in language and the mechanisms of selection in grammar that are necessary to maintain this property. The core unresolved issues in compositionality, relating to the interpretation of context and the mechanisms of selection, are treated from varying perspectives within GL theory, including its basic theoretical mechanisms and its analytical viewpoint on linguistic phenomena.
