

1. Record Nr.	UNINA9910437993003321
Titolo	Movement disorder emergencies : diagnosis and treatment // Steven J. Frucht, editor
Pubbl/distr/stampa	New York, : Humana Press, 2013
ISBN	1-283-84919-4 1-60761-835-4
Edizione	[2nd ed.]
Descrizione fisica	1 online resource (xviii, 401 pages) : illustrations
Collana	Current clinical neurology
Altri autori (Persone)	FruchtSteven J
Disciplina	616.8/0425 616.80425
Soggetti	Movement disorders Neurological emergencies
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	A Brief Introduction to Movement -- Acute Parkinsonism Parkinsonism-Hyperpyrexia Syndrome in Parkinson's Disease -- Neuroleptic Malignant Syndrome -- Malignant Catatonia -- Psychosis and Parkinson's Disease -- Abductor Paresis in Shy-Drager Disease -- Movement Disorder Emergencies of ohe Upper Aerodigestive Tract. - Dystonic Storm -- Pseudodystonic Emergencies -- Tardive and Neuroleptic-Induced Emergencies -- Hemiballism-Hemichorea -- Sydenham's chorea, PANDAS and other Post-streptococcal neurological disorders -- Emergencies in Huntington's Disease -- Acute Spinal Rigidity -- Tic Emergencies -- Malignant Phonic Tics -- Serotonin Syndrome -- Risks and Dangers From Hyperekplexia and Other Startle Disorders -- Perioperative emergencies associated with deep brain stimulation -- Psychogenic Movement Disorders -- Anti-NMDA receptor encephalitis and other autoimmune and paraneoplastic movement disorders -- Wilson's disease -- Dopa-Responsive Dystonia -- Whipple's Disease -- Driving risk in patients with movement disorders -- Suicide risk in Parkinson's disease -- Genetics and Genetic Counseling Related Issues.
Sommario/riassunto	Updated and expanded with nine additional chapters, Movement Disorder Emergencies: Diagnosis and Treatment, Second Edition is an

indispensable resource for general neurologists, specialists, fellows, and residents eager to improve their approach toward the patient with a movement disorder emergency. In this comprehensive second edition, prominent neurologists from around the world logically and systematically review the major movement disorder emergencies, instructing the reader on how optimally to recognize and manage these problems. The authors cover a broad range of disorders, including acute dystonic reactions, neuroleptic malignant syndrome, startle syndromes, tic emergencies, and others; and they stress the importance of certain obvious diagnoses such as Wilson's disease, dopa-responsive dystonia, and Whipple's disease, in which delayed diagnosis in less emergent situations can lead to slowly evolving and often irreversible neurologic damage with tragic consequences. In addition, nine topics not covered in the first edition are provided, including genetic counseling and testing crises, suicide risk, psychogenic movement disorders, and others. Patient vignettes at the beginning of each chapter focus the reader's attention and highlight the urgency of the problem. Since astute clinical diagnosis of many movement disorders is still largely dependent on visual pattern recognition in the clinic, an accompanying online collection of physician-patient vignettes illustrates virtually all of the movement disorders described in the text. Importantly, the authors also discuss a range of new treatment paradigms that have emerged since publication of the first edition, especially deep brain stimulation. Authoritative and a leading text in the field, *Movement Disorder Emergencies: Diagnosis and Treatment, Second Edition* is an established, practical reference that continues to achieve excellence in the field of diagnosis and management of movement disorder emergencies.
