Each chapter of Cytopathology: An Introduction starts by detailing the main methods available appropriate to the clinical situation, followed by descriptions of the relevant cytological appearances and diagnostic pitfalls. Topics covered include the brain and cerebrospinal fluid; pulmonary cytology; serous fluids; thyroid gland; lymph nodes; salivary glands; gastrointestinal and hepatopancreaticobiliary tracts; urinary tract and retroperitoneal cytology; female genital tract; breast; soft tissue, bones and joints; and skin. Cytopathology: An Introduction will be an invaluable reference guide to histo- and cytopathology trainees, as well as those preparing

for post-graduate examinations and consultants who want a refresher. A quick reference, concise but precise, *Cytopathology: An Introduction* provides practical and helpful information on the salient cytological features of any condition that may present in routine cytopathology.
