

1. Record Nr.	UNINA9910438002903321
Titolo	Dermatologic ultrasound with clinical and histologic correlations / / Ximena Wortsman, editor-in-chief ; Gregor B.E. Jemec, co-editor
Pubbl/distr/stampa	New York, : Springer, 2013
ISBN	1-4614-7184-2
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (xvi, 623 pages) : illustrations (some color)
Collana	Gale eBooks
Altri autori (Persone)	WortsmanXimena JemecG. B. E (Gregor B. E.)
Disciplina	616.507543
Soggetti	Skin - Ultrasonic imaging
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	pt. I. The requisites -- pt. II. Clinical applications -- pt. III. Terms, classifications, and protocols.
Sommario/riassunto	Significant technological advances have produced equipment that allows imaging of the skin with variable frequency ultrasound in previously unseen detail and provides a range of dynamic data that is currently unmatched by any other technology. Dermatologic Ultrasound with Clinical and Histologic Correlations is a comprehensive introduction to ultrasonography of the skin, nails, and scalp as it relates to the assessment and diagnosis of dermatologic diseases. It provides radiologists, sonographers, dermatologists, and physicians with interest in skin imaging with a concise understanding of the diagnosis of dermatologic conditions through extensive high-resolution gray scale and color Doppler ultrasound images and presents classical correlations of clinical dermatologic lesions with sonographic and histologic findings. Featuring more than 1700 images, this text-atlas provides an excellent starting point in learning about this topic. Featuring contributions from world-renowned authorities in the field of superficial ultrasound imaging, the book reviews the technical considerations relating to color Doppler ultrasound of the skin; surveys the dermatologic entities that can be visualized with ultrasound imaging, such as cutaneous tumors, inflammatory diseases, hemangiomas and vascular malformations, melanoma, nail tumors, scalp diseases and cosmetic conditions; shows

common simulators of cutaneous diseases; and discusses protocols for assessing common dermatologic conditions. Inclusion of clinical overviews, tips, and pitfalls enables a better understanding of the pathologies of the disorders and the methodological approach in assessing these entities.
