

1. Record Nr.	UNINA9910438022603321
Autore	Pederzoli Paolo
Titolo	Uncommon Pancreatic Neoplasms [[electronic resource] /] / by Paolo Pederzoli, Claudio Bassi
Pubbl/distr/stampa	Milano : , : Springer Milan : , : Imprint : Springer, , 2013
ISBN	1-283-93578-3 88-470-2673-3
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (213 p.)
Collana	Updates in Surgery, , 2280-9848
Disciplina	616.99437
Soggetti	Surgery
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	pt. I. Cystic pancreatic neoplasms -- pt. II. Neuroendocrine pancreatic neoplasms -- pt. III. Uncommon pancreatic solid neoplasms.
Sommario/riassunto	Uncommon tumors of the pancreas are of increasing interest for clinicians: cross imaging techniques development makes it possible to detect small lesions in the pancreatic gland of asymptomatic patients, and in the last decades a more detailed and specific pathological classification definitively opened an unexpected world of more or less rare pancreatic tumors. As a matter of fact, nowadays most surgical procedures deal with these so called uncommon pancreatic tumors such as cystic, endocrine and others unfrequent histotypes, and many patients experiencing an accidental discovery of this type of tumor need therefore a specialistic evaluation. The concept behind this volume is the need to give the correct clinical relevance to these "uncommon" tumors, that are ranked at the first place among pancreatic tumors, and that are definitively curable with a multimodal approach. Aim of the book is therefore to get clinicians closer to these pathologies, describing their complexity and the current state of the art in diagnostic, therapeutic and pathological classification strategy, thus providing them with the tools for a modern and updated clinical management of these patients.
