

1. Record Nr.	UNINA9910438040803321
Titolo	Ambient Intelligence - Software and Applications [[electronic resource]] : 4th International Symposium on Ambient Intelligence (ISAmI 2013 // edited by Ad van Berlo, Kasper Hallenborg, Juan M. Corchado Rodríguez, Dante I. Tapia, Paulo Novais
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2013
ISBN	3-319-00566-9
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (244 p.)
Collana	Advances in Intelligent Systems and Computing, , 2194-5357 ; ; 219
Disciplina	300
Soggetti	Computational intelligence Artificial intelligence Computational Intelligence Artificial Intelligence
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	From the Contents: Content-based Design and Implementation of Ambient Intelligence Applications -- Tracking People and Equipment Simulation inside Healthcare Unit -- Requirements Systematization through Pattern Application in Ubiquitous Systems -- Indoor tracking persons using bluetooth: a real experiment with different fingerprinting-based algorithms.
Sommario/riassunto	Ambient Intelligence (AmI) is a recent paradigm emerging from Artificial Intelligence (AI), where computers are used as proactive tools assisting people with their day-to-day activities, making everyone's life more comfortable. Another main concern of AmI originates from the human computer interaction domain and focuses on offering ways to interact with systems in a more natural way by means user friendly interfaces. This field is evolving quickly as can be witnessed by the emerging natural language and gesture based types of interaction. The inclusion of computational power and communication technologies in everyday objects is growing and their embedding into our environments should be as invisible as possible. In order for AmI to be successful, human interaction with computing power and embedded

systems in the surroundings should be smooth and happen without people actually noticing it. The only awareness people should have arises from Aml: more safety, comfort and wellbeing, emerging in a natural and inherent way. ISAml is the International Symposium on Ambient Intelligence and aiming to bring together researchers from various disciplines that constitute the scientific field of Ambient Intelligence to present and discuss the latest results, new ideas, projects and lessons learned, namely in terms of software and applications, and aims to bring together researchers from various disciplines that are interested in all aspects of this area.
