

1. Record Nr.	UNINA9910438046803321
Autore	Chatterjee Amitava
Titolo	Vision based autonomous robot navigation : algorithms and implementations // Amitava Chatterjee, Anjan Rakshit and N. Nirmal Singh
Pubbl/distr/stampa	Berlin ; ; Heidelberg, : Springer, c2013
ISBN	9783642339653 3642339654
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (X, 226 p.)
Collana	Studies in computational intelligence ; ; v. 455
Altri autori (Persone)	RakshitAnjan SinghN. Nirmal
Disciplina	629.892637
Soggetti	Robot vision Mobile robots
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Mobile Robot Navigation -- Interfacing External Peripherals with a Mobile Robot -- Vision-Based Mobile Robot Navigation Using Subgoals -- Indigenous Development of Vision-Based Mobile Robots -- Sample Implementations of Vision-Based Mobile Robot Algorithms -- Vision Based Mobile Robot Path/Line Tracking -- Simultaneous Localization and Mapping (SLAM) in Mobile Robots -- Vision Based SLAM in Mobile Robots.
Sommario/riassunto	This book is devoted to the theory and development of autonomous navigation of mobile robots using computer vision based sensing mechanism. The conventional robot navigation systems, utilizing traditional sensors like ultrasonic, IR, GPS, laser sensors etc., suffer several drawbacks related to either the physical limitations of the sensor or incur high cost. Vision sensing has emerged as a popular alternative where cameras can be used to reduce the overall cost, maintaining high degree of intelligence, flexibility and robustness. This book includes a detailed description of several new approaches for real life vision based autonomous navigation algorithms and SLAM. It presents the concept of how subgoal based goal-driven navigation can be carried out using vision sensing. The development concept of vision

based robots for path/line tracking using fuzzy logic is presented, as well as how a low-cost robot can be indigenously developed in the laboratory with microcontroller based sensor systems. The book describes successful implementation of integration of low-cost, external peripherals, with off-the-shelf procured robots. An important highlight of the book is that it presents a detailed, step-by-step sample demonstration of how vision-based navigation modules can be actually implemented in real life, under 32-bit Windows environment. The book also discusses the concept of implementing vision based SLAM employing a two camera based system. .
