

1. Record Nr.	UNINA9910438055003321
Titolo	Adaptive, tolerant and efficient composite structures // Martin Wiedemann, Michael Sinapius, editors
Pubbl/distr/stampa	Heidelberg ; ; New York, : Springer, 2012, c2013
ISBN	3-642-29190-2
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (455 p.)
Collana	Research topics in aerospace, , 2194-8240
Altri autori (Persone)	SinapiusMichael WiedemannMartin
Disciplina	620.1 620.1/18 620.118
Soggetti	Composite materials Smart materials
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Multifunctional Materials -- Structural Mechanics -- Composite Design -- Composite Technology -- Adaptronics.
Sommario/riassunto	Polymer composites offer the possibility for functional integration since the material is produced simultaneously with the product. The efficiency of composite structures raises through functional integration. The specific production processes of composites offer the possibility to improve and to integrate more functions thus making the structure more valuable. Passive functions can be improved by combination of different materials from nano to macro scale, i.e. strength, toughness, bearing strength, compression after impact properties or production tolerances. Active functions can be realized by smart materials, i.e. morphing, active vibration control, active structure acoustic control or structure health monitoring. The basis is a comprehensive understanding of materials, simulation, design methods, production technologies and adaptronics. These disciplines together deliver advanced lightweight solutions for applications ranging from mechanical engineering to vehicles, airframe and space structures along the complete process chain. The book provides basics as well as inspiring ideas for engineers working in the field of adaptive, tolerant

and robust composite structures.
