

1. Record Nr.	UNINA9910438070403321
Titolo	The 19th International Conference on Industrial Engineering and Engineering Management : Assistive Technology of Industrial Engineering // edited by Ershi Qi, Jiang Shen, Runliang Dou
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2013
ISBN	3-642-38391-2
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (1586 p.)
Altri autori (Persone)	QiErshi ShenJiang DouRunliang
Disciplina	670.42
Soggetti	Technological innovations Industrial engineering Production engineering Innovation and Technology Management Industrial and Production Engineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters.
Nota di contenuto	Advanced Decision Analysis and Methods -- Operations Research -- Systems Modeling and Simulation -- Workflow Technologies and Applications.
Sommario/riassunto	The International Conference on Industrial Engineering and Engineering Management is sponsored by the Chinese Industrial Engineering Institution, CMES, which is the only national-level academic society for Industrial Engineering. The conference is held annually as the major event in this arena. Being the largest and the most authoritative international academic conference held in China, it provides an academic platform for experts and entrepreneurs in the areas of international industrial engineering and management to exchange their research findings. Many experts in various fields from China and around the world gather together at the conference to review, exchange, summarize and promote their achievements in the fields of industrial engineering and engineering management. For example,

some experts pay special attention to the current state of the application of related techniques in China as well as their future prospects, such as green product design, quality control and management, supply chain and logistics management to address the need for, amongst other things low-carbon, energy-saving and emission-reduction. They also offer opinions on the outlook for the development of related techniques. The proceedings offers impressive methods and concrete applications for experts from colleges and universities, research institutions and enterprises who are engaged in theoretical research into industrial engineering and engineering management and its applications. As all the papers are of great value from both an academic and a practical point of view, they also provide research data for international scholars who are investigating Chinese style enterprises and engineering management.
