Sommario/riassunto	"Achieving peace or protecting human rights? Conflicts between norms regarding ethnic discrimination in the Dayton Peace Agreement"

examines some of the legal issues pertaining to international settlements aiming at ending a war, finding political common ground between bitter enemies, and at the same time, protecting individual human rights. The author examines the Dayton Peace Agreement for Bosnia and Herzegovina, and in particular the constitutional framework which on the one hand secures everyone's human rights and protection from ethnic discrimination, but on the other hand sets up a political system which in fact discriminates on the basis of ethnicity. The author argues that it might have been consistent with international law (particularly the legal regimes of derogation and necessity) to agree on such a constitutional system at the time of the Dayton negotiations because the alternative was a high risk of continued war, but that a constitutional arrangement with clear human rights deficiencies should have been made temporary. The author points out that the ethnically-based constitutional system, for the time being, seems to prevail at the expense of the right to non-discrimination, and discusses various possibilities of altering this situation.

Sommario/riassunto

This book is concerned with one of the most fundamental questions of mathematics: the relationship between algebraic formulas and geometric images. At one of the first international mathematical congresses (in Paris in 1900), Hilbert stated a special case of this question in the form of his 16th problem (from his list of 23 problems left over from the nineteenth century as a legacy for the twentieth century). In spite of the simplicity and importance of this problem (including its numerous applications), it remains unsolved to this day (although, as you will now see, many remarkable results have been discovered).
