

1. Record Nr.	UNINA9910438149403321
Autore	Capietto Anna
Titolo	Stability and bifurcation theory for non-autonomous differential equations : Cetraro, Italy 2011 // Anna Capietto ... [et al.] ; editors, Russell Johnson, Maria Patrizia Pera
Pubbl/distr/stampa	Berlin ; ; New York, : Springer, 2013
ISBN	3-642-32906-3
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (IX, 303 p. 26 illus., 9 illus. in color.)
Collana	Lecture notes in mathematics ; ; 2065. CIME foundation subseries
Classificazione	34B1537B5534C2537E4037G3534K12
Altri autori (Persone)	JohnsonR (Russell) PeraMaria Patrizia
Disciplina	515.355
Soggetti	Differential equations, Nonlinear Stability Bifurcation theory
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	The Maslov index and global bifurcation for nonlinear boundary value problems -- Discrete-time nonautonomous dynamical systems -- Resonance problems for some non-autonomous ordinary differential equations -- Non-autonomous functional differential equations and applications -- Twist mappings with non-periodic angles.
Sommario/riassunto	This volume contains the notes from five lecture courses devoted to nonautonomous differential systems, in which appropriate topological and dynamical techniques were described and applied to a variety of problems. The courses took place during the C.I.M.E. Session "Stability and Bifurcation Problems for Non-Autonomous Differential Equations," held in Cetraro, Italy, June 19-25 2011. Anna Capietto and Jean Mawhin lectured on nonlinear boundary value problems; they applied the Maslov index and degree-theoretic methods in this context. Rafael Ortega discussed the theory of twist maps with nonperiodic phase and presented applications. Peter Kloeden and Sylvia Novo showed how dynamical methods can be used to study the stability/bifurcation properties of bounded solutions and of attracting sets for nonautonomous differential and functional-differential equations. The volume will be of interest to all researchers working in these and

related fields.
