1. Record Nr.   UNINA9910438153203321

   Titolo   Stochastic biomathematical models : with applications to neuronal modeling / / Mostafa Bachar, Jerry Batzel, Susanne Ditlevsen, editors

   Pubbl/distr/stampa   Berlin ; ; New York, : Springer, c2013

   ISBN   3-642-32157-7

   Edizione   [1st ed. 2013.]

   Descrizione fisica   1 online resource (XVI, 206 p. 34 illus., 13 illus. in color.)

   Collana   Lecture notes in mathematics, , 0075-8434 ; ; 2058. Mathematical biosciences subseries

   Altri autori (Persone) BacharMostafa

   Disciplina   612.8/1046015118

   Soggetti   Neurons - Mathematical models
                         Stochastic models
                         Computational neuroscience

   Lingua di pubblicazione Inglese

   Formato   Materiale a stampa

   Livello bibliografico Monografia

   Note generali   Bibliographic Level Mode of Issuance: Monograph

   Nota di bibliografia Includes bibliographical references and index.

   Nota di contenuto   1 Introduction to stochastic models in biology -- 2 One-dimensional homogeneous diffusions -- 3 A brief introduction to large deviations theory -- 4 Some numerical methods for rare events simulation and analysis -- 5 Stochastic Integrate and Fire models: a review on mathematical methods and their applications -- 6 Stochastic partial differential equations in Neurobiology: linear and nonlinear models for spiking neurons -- 7 Deterministic and stochastic FitzHugh-Nagumo systems -- 8 Stochastic modeling of spreading cortical depression.

   Sommario/riassunto   Stochastic biomathematical models are becoming increasingly important as new light is shed on the role of noise in living systems. In certain biological systems, stochastic effects may even enhance a signal, thus providing a biological motivation for the noise observed in living systems. Recent advances in stochastic analysis and increasing computing power facilitate the analysis of more biophysically realistic models, and this book provides researchers in computational neuroscience and stochastic systems with an overview of recent developments. Key concepts are developed in chapters written by experts in their respective fields. Topics include: one-dimensional

homogeneous diffusions and their boundary behavior, large deviation theory and its application in stochastic neurobiological models, a review of mathematical methods for stochastic neuronal integrate-and-fire models, stochastic partial differential equation models in neurobiology, and stochastic modeling of spreading cortical depression.
