

1. Record Nr.	UNINA9910440001103321
Titolo	ANSI/IEEE Std 676-1986 : IEEE guide for alarm monitoring and reporting systems for fossil-fueled power generating stations // Institute of Electrical and Electronics Engineers
Pubbl/distr/stampa	Piscataway, New Jersey : , : IEEE, , 1986
ISBN	0-7381-4243-3
Descrizione fisica	1 online resource
Disciplina	621.3121
Soggetti	Electric power-plants Security systems Electric alarms
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	This guide provides guidelines for the organization of fossil-fueled power generating plant alarm and monitoring information into types and categories, taking into consideration information usefulness and limitations. This guide further serves to establish guidelines for correlating type and category of alarm and monitoring information with the appropriate information-display devices. Adherence to the categorization and the corresponding information-display techniques presents prioritized alarm and monitoring information to the operator which is appropriately proportioned between the window annunciator, CRT, mimic display, and printer. This also permits a reduction in the number of window annunciators over historic practices.
