### Sommario/riassunto

Throughout Latin America, indigenous peoples are demanding that development must address local priorities, including ethnic identity. Simultaneously, sustainability scientists need to conduct place-based research on the interaction between environment and society which will have global relevance. This book reports on a six-year interdisciplinary research project on natural resource management in Cotacachi, Ecuador, where scientists and indigenous groups learn to seek common ground. The book discusses how local people and the environment have engaged each other over time to create contemporary
