Sommario/riassunto

While devotional practices are usually viewed as mechanisms for reinforcing religious boundaries, in the multicultural, multiconfessional world of the Eastern Mediterranean, shared shrines sustain intercommunal and interreligious contact among groups. Heterodox, marginal, and largely ignored by central authorities, these practices persist despite aggressive, homogenizing nationalist movements. This volume challenges much of the received wisdom concerning the three major monotheistic religions and the ""clash of civilizations.""
Contributors examine intertwined religious traditions along the sh

Sommario/riassunto

This book examines recent research into the molecular biology, genomics and transcriptomics of, and novel control strategies for, flatworm parasites. These include Cestodes (tapeworms) and Trematodes (flukes, schistosomes etc), which are the cause of a number of diseases of medical and veterinary importance. The book explores three main areas: phylogeny, genetics and transcriptomes; immunobiology, host-parasite interaction and control; and protein function, metabolism and physiology. Where appropriate, comparisons are made between different parasitic flatworms and between parasitic and free-living.
