   Nota di bibliografia Includes bibliographical references and index.

   Sommario/riassunto   Integrated xSeries Solutions for iSeries deliver value to customers to
                         reduce the cost and complexity of managing and deploying Windows
                         Server applications on Intel. Support for Linux applications on
                         Integrated xSeries Server or Integrated xSeries Adapter (IXS/IXA) is
                         being offered to provide additional value to customers who require
                         Linux applications to run on Intel servers, but who wish to leverage the
                         powerful virtualization capabilities, shared resources, and operations of
                         iSeries to support a Linux environment on xSeries servers. This IBM
                         Redbooks publication will help you understand, plan, install, and
                         configure Linux distributions on Integrated xSeries Server or Integrated
                         xSeries Adapter.
