Sommario/riassunto	Global patterns of production and trade in manufactures have changed tremendously over the past two decades. The growth of world trade has been accompanied by a rapid increase in the number of products, suppliers and buyers involved in international markets. At the same time, the means by which manufacturers compete and collaborate have been changing. The great challenges that these developments pose for policy makers and practitioners provide the basic motive for this comprehensive assessment of the underlying forces and determinants that are reshaping the world's industrial map.
