Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"April 2004."
Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	This IBM Redbooks publication provides a comprehensive and detailed guide to the installation and configuring of the recently released products WebSphere BI for FN Base and Extension. These products are primarily designed to provide support for message processing over the new SWIFT Secure IP Network (SIPN) and provide a well-architected platform for future applications. This book has been prepared as a response to questions from customers regarding the installation, configuration, and operations of WebSphere BI for FN. During the residency several other relevant topics were identified and included in the book. The new topics include a discussion of the WebSphere BI for FN environment covering high availability considerations, performance issues, and security requirements. Also, a section has been included with updated information regarding the importance of understanding the use and definition of roles, users, and user groups for customization.
