Sommario/riassunto

Metropolitan Governance and Spatial Planning explores the relationship between metropolitan decision-making and strategies to co-ordinate spatial policy. This relationship is examined across 20 cities of Europe and the similarities and differences analysed.Cities are having to formulate their urban policies in a very complex and turbulent environment. They are faced with numerous new pressures and problems and these often create contradictory conditions. The book provides a theoretical framework for exploring these issues and links this to a detailed investigation of each city. <
