Sommario/riassunto	This study seeks to argue that Job 28 is an integral part of the book as it stands, and that it is Job's speech. Job 28 serves a special rhetorical function within the book, and more specifically within chapters 22-31. This work provides a significant interpretative key to Job 28 within the most perplexing section of the book (Job 22-31). Job 28 is in contradictory juxtaposition with other sayings of Job. However, this study argues that such contradictory juxtaposition is a feature of Job's speeches in chapters 22-31, and is part of the author's strategy to make a rhetorical impact upon the audience.

Sommario/riassunto	Analysis with Ultrasmall Numbers presents an intuitive treatment of mathematics using ultrasmall numbers. With this modern approach to infinitesimals, proofs become simpler and more focused on the combinatorial heart of arguments, unlike traditional treatments that use epsilon-delta methods. Students can fully prove fundamental results, such as the Extreme Value Theorem, from the axioms immediately, without needing to master notions of supremum or

compactness. The book is suitable for a calculus course at the undergraduate or high school level or for self-study with an emphasis on nonstandard
