

1. Record Nr.	UNINA9910449883803321
Autore	Awrejcewicz J (Jan)
Titolo	Bifurcation and chaos in nonsmooth mechanical systems [[electronic resource] /] / Jan Awrejcewicz, Claude-Henri Lamarque
Pubbl/distr/stampa	River Edge, NJ, : World Scientific, 2003
ISBN	1-281-87691-7 9786611876913 981-256-480-2
Descrizione fisica	1 online resource (564 p.)
Collana	World Scientific series on nonlinear science. Series A, Monographs and treatises ; ; v. 45
Altri autori (Persone)	LamarqueClaude-Henri
Disciplina	515/.392
Soggetti	Bifurcation theory Chaotic behavior in systems Differential equations, Nonlinear Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. 507-530) and index.
Nota di contenuto	Preface; Contents; Chapter 1 Introduction to Discontinuous ODEs; Chapter 2 Mathematical Background for Multivalued Formulations; Chapter 3 Numerical Schemes and Analytical Methods; Chapter 4 Properties of Numerical Schemes; Chapter 5 Bifurcations of a Particular van der Pol-Duffing Oscillator; Chapter 6 Stick-Slip Oscillator with Two Degrees of Freedom; Chapter 7 Piecewise Linear Approximations; Chapter 8 Chua's Circuit with Discontinuities; Chapter 9 Mechanical System with Impacts and Modal Approaches; Chapter 10 One DOF Mechanical System with Friction Chapter 11 Modelling the Dynamical Behaviour of Elasto-Plastic Systems Chapter 12 A Mechanical System with 7 DOF; Chapter 13 Stability of Singular Periodic Motions in Single Degree of Freedom Vibro-Impact Oscillators and Grazing...; Chapter 14 Triple Pendulum with Impacts; Chapter 15 Analytical Prediction of Stick-Slip Chaos; Chapter 16 Thermoelasticity, Wear and Stick-Slip Movements of a Rotating Shaft with a Rigid Bush; Chapter 17 Control for Discrete Models of Buildings Including Elastoplastic Terms; Bibliography; Index

## Sommario/riassunto

This book presents the theoretical frame for studying lumped nonsmooth dynamical systems: the mathematical methods are recalled, and adapted numerical methods are introduced (differential inclusions, maximal monotone operators, Filippov theory, Aizerman theory, etc.).
