Sommario/riassunto	Whether you are an investment professional managing billions of dollars or an individual investor with a small nest egg, TrimTabs Investing shows you how to beat the major stock market averages with less risk. This groundbreaking book begins by comparing the stock market to a casino in which the house (public companies and the insiders who run them) buys and sells shares with the players (institutional and individual investors). TrimTabs Investing argues that stock prices are primarily a function of liquidity-the amount of shares

available for purchase and the amount of money
