Descrizione fisica	1 online resource (xiv, 248 pages) : digital, PDF file(s)
Disciplina	384.55
Soggetti	High definition television - United States High definition television - Government policy - United States High definition television - Europe High definition television - Government policy - Europe High definition television - Japan High definition television - Government policy - Japan Competition, International
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Title from publisher's bibliographic system (viewed on 05 Oct 2015).
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	The institutional setting for advanced TV -- Digital convergence : consumer electronics -- HDTV in Japan -- HDTV in the United States -- HDTV in Europe -- Digital television in the United States -- Digital television in Europe and Japan -- Examples of global standards.
Sommario/riassunto	In the late 1980s and 1990s, the advanced industrial countries considered replacing the existing analogue television infrastructure with a new digital one. A key common feature to the debates over digital TV (DTV) in the United States, Western Europe and Japan was the

eventual victory of the ideas of digitalism (the superiority of everything digital over everything analogue) and of digital convergence (the merging of computing, telecommunications and broadcasting infrastructures made possible by digitalization) in public debates over standards. Jeffrey Hart's book shows how nationalism and regionalism combined with digitalism to produce three different and incompatible DTV standards in the three regions, an outcome which has led to missed opportunities in developing the new technologies. Hart's book contributes to our understanding of relations between business and government, and of competition between the world's great economic powers.
