

1. Record Nr.	UNINA9910450224903321
Autore	Greenspan Donald
Titolo	Molecular and particle modelling of laminar and turbulent flows [[electronic resource] /] / by Donald Greenspan
Pubbl/distr/stampa	Hackensack, N.J., : World Scientific, 2005
ISBN	1-281-88102-3 9786611881023 981-256-935-9
Descrizione fisica	1 online resource (179 p.)
Disciplina	532/.052/015118
Soggetti	Turbulence - Mathematical models Laminar flow - Mathematical models Water vapor transport - Mathematical models Vapors - Mathematical models Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Preface; Contents; 1. Mathematical, Physical, and Computational Preliminaries; 2. Molecular Cavity Flow of Argon Vapor in Two Dimensions; 3. Molecular Cavity Flow of Air Vapor in Two Dimensions; 4. Molecular Cavity Flow of Water Vapor in Two Dimensions; 5. Molecular Cavity Flow of Water Vapor in Three Dimensions; 6. Particle Models of Flow in Two Dimensions; 7. The Flow of Water Vapor Around a Flat Plate; 8. Extant Problems with Continuum Models; References and Additional Sources; Index
Sommario/riassunto	Turbulence is the most fundamental and, simultaneously, the most complex form of fluid flow. However, because an understanding of turbulence requires an understanding of laminar flow, both are explored in this book. Groundwork is laid by careful delineation of the necessary physical, mathematical, and numerical requirements for the studies which follow, and include discussions of N-body problems, classical molecular mechanics, dynamical equations, and the leap frog formulas for very large systems of second order ordinary differential equations.
