Sommario/riassunto	Based on extensive original economic analysis, Chen examines key questions relating to corporate governance in China, including the relationship between ownership structure and corporate performance, the determinants of capital structure, and the nature of contemporary governance structures. It concludes that corporate performance is positively related to ownership concentration, but negatively related to state ownership, and that contemporary corporate governance structures are heavily dependent on previous structures in the centrally-planned economy and on the path of transition to the marke

Sommario/riassunto	"Historians of science and the philosophy of science find the substance and stance of Isaac Beeckman's thought highly interesting, for it represented an early attempt to develop a comprehensive picture of the world by means of mechanistic theory, that is, forces acting upon one another. Besides possibly influencing Descartes, this view broke away from medieval religious assumptions and belief in occult forces. Berkel teases out Beeckman's evolving approach to nature by means of his extensive journals, explaining the leading concept of "picturability." Beeckman supplied a stepping stone (one still not widely appreciated)

on the path that led to the scientific revolution"--
