

1. Record Nr.	UNINA9910450494803321
Autore	White Bill
Titolo	IBM eserver zSeries 990 technical guide [[electronic resource] /] / [Bill White, Mario Almeida, Dick Jorna]
Pubbl/distr/stampa	Poughkeepsie, NY, : IBM, International Technical Support Organization, c2004
Edizione	[2nd ed.]
Descrizione fisica	1 online resource (284 p.)
Collana	IBM redbooks
Altri autori (Persone)	AlmeidaMario JornaDick
Disciplina	004
Soggetti	IBM computers Client/server computing Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"May 2004." "SC24-6947-01." The "e" in "eserver" is printed as the symbol for electronic.
Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	The IBM Eserver zSeries® 990 scalable server provides major extensions to the existing zSeries architecture and capabilities. The concept of Logical Channel Subsystems is added, and the maximum number of Processor Units and logical partitions is increased. These extensions provide the base for much larger zSeries servers. This IBM® IBM Redbooks publication is intended for IBM systems engineers, consultants, and customers who need to understand the zSeries 990 features, functions, availability, and services. This publication is part of a series. For a complete understanding of the z990 scalable server capabilities, also refer to our companion Redbooks: IBM Eserver zSeries 990 Technical Introduction, SG24-6863 IBM Eserver zSeries Connectivity Handbook, SG24-5444 Note that the information in this book includes features and functions announced on April 7, 2004, and that certain functionality is not available until hardware Driver Level 55 is installed on the z990 server.
