selling biodiversity with local livelihoods / Ione Egler -- The mixed experience of private sector involvement in biodiversity management in Costa Rica / Michael Sturm -- The uncertain role of biodiversity management in emerging democracies / Martin Welp [and others] -- Enhancing biodiversity and humanity / Susanne Stoll-Kleemann and Tim O'Riordan.

Sommario/riassunto

Biodiversity is the key indicator of a healthy planet and healthy society. Losses of biodiversity have now become widespread and current rates are potentially catastrophic for species and habitat integrity. Biodiversity, Sustainability and Human Communities, first published in 2002, advocates both the preservation of the best remaining habitats and the enhancement of new biodiverse habitats to ensure that they cope with human impact, climate change and alien species invasion. The authors argue that these aims can be achieved by a mix of strict protection, inclusive involvement of people inside and adjacent to reserves, and by combining livelihoods and social well-being in all future biodiversity management. Case studies from regions around the world, including Europe, the United States, Latin America and Africa are examined and discussed, and the contributors include political scientists, economists and ecologists.
