Sommario/riassunto	Eros and Polis examines how and why Greek theorists treated political passions as erotic. Because of the tiny size of ancient Greek cities, contemporary theory and ideology could conceive of entire communities based on desire. A recurrent aspiration was to transform the polity into one great household that would bind the citizens

together through ties of mutual affection. In this study, Paul Ludwig evaluates sexuality, love and civic friendship as sources of political attachment and as bonds of political association. Studying the ancient view of eros recovers a way of looking at political phenomena that provides a bridge, missing in modern thought, between the private and public spheres, between erotic love and civic commitment. Ludwig's study thus has important implications for the theoretical foundations of community.
