Sommario/riassunto This volume provides a complete description of ASL variation. People

from varying regions and backgrounds have different ways of saying the same thing. For example, in English some people say "test," while others say "tes'," dropping the final "t." Noted scholars Ceil Lucas, Robert Bayley, and Clayton Valli led a team of exceptional researchers in applying techniques for analyzing spoken language variation to ASL. Their observations at the phonological, lexical, morphological, and

syntactic levels demonstrate that ASL variation correlates with many of

the same driving social factors of spoken languages, including age, socioeconomic class, gender, ethnic background, region, and sexual orientation. Internal constraints that mandate variant choices for spoken languages have been compared to ASL as well, with intriguing results.

Sommario/riassunto

The present volume is a corpus-based study of the occurrence. variation, and change in the use of English adjective pairs in - ic and ical over several centuries. The study involves the analysis of large, multi-million-word corpora representing the English language at various stages. It examines the nature of competition between the two affixes: what kind of rivalry existed, what kinds of words entered into competition, and in what ways the rivalry was resolved. The book presents close studies of six notably differentiated -ic/-ical adjective pairs, namely classic/classical, comic/comical, economic/economical, electric/electrical, historic/historical, and magic/magical, as well as commentaries on some 40 other -ic/-ical pairs, which manifest different types of shifts in use through history. It also includes critical discussion of general perceptions on and approaches to the practical use of corpora, stressing the importance of close and careful study of the materials under analysis. It further emphasises the value of consulting a variety of sources alongside corpora, including dictionaries and language usage manuals. This volume is of interest to language scholars in many fields, including corpus linguistics, diachronic linguistics, semantic change, lexicology, and word formation.
