Sommario/riassunto

What is it really like to be a dog? Do animals experience emotions like pleasure, joy, and grief? Marc Bekoff's work draws world-wide attention for its originality and its probing into what animals think about and know as well as what they feel, what physical and mental skills they use to live successfully within their social community. Bekoff's work, whether addressed to scientists or the general public, demonstrates that investigations into animal thought, emotions, self-awareness, behavioral ecology, and conservation biology can be compassionate as well as scientifically rigorous.
