Sommario/riassunto	This clear, concise summary of the in-depth analyses presented in The Political Economy of American Trade Policy examines the level, form, and evolution of American trade protection. In case studies of trade

barriers imposed during the 1980's to help the steel, semiconductor, automobile, lumber, wheat, and textile and apparel industries, the contributors trace the evolution of efforts to obtain protection, protectionist measures, and their results. A chapter assessing the common themes that emerge from the studies concludes that the focus of current trade law is exclusively on the individual protection-seeking industries, with little regard for indirect effects on using industries or for consumers. Reform could usefully take these effects into account. This volume will interest policymakers, business executives, and anyone interested in trade policy formulation and practice.
