Note generali	Description based upon print version of record.
Nota di contenuto	Cover; CONTENTS; Editorial advisory board; Guest editorial; Exploring the development of supply chain international joint ventures; Internal and external logistics information technologies; Supply chain relationships and information capabilities; The storage constrained, inbound inventory routing problem
Sommario/riassunto	This e-book contains four exploratory research papers from the 2006 SCMID conference at the Society of Marketing Advances. The first two manuscripts look into the importance of international supply chain management, and provide a solid platform for grounding future research in international supply chain strategy, strategic goal separation, and resource management. The second two studies examine supply chain management in a domestic setting, and uncover new logic that can be applied both specifically to practice and to the development of new theoretical models and modeling.

Sommario/riassunto	This book addresses human factors research in energy, an emphasis on human factors applications in design, construction, and operation of nuclear, electrical power generation, and oil and gas assets. It discusses advanced strategies in the optimization of human and environmental performance, as well as personal and process safety. The book covers a wealth of topics in design and operation management of both offshore and onshore facilities, including design of control rooms, front-end engineering design (FEED), criticality

analysis, offshore transport, human contributions to accidents, cognitive bias in decision making, safety-critical human tasks, and many others. Based on the AHFE2017 Conference on Human Factors in Energy: Oil, Gas, Nuclear and Electric Power Industries, July 17-21, Los Angeles, California, USA, the book fills an important gap in the current literature, providing readers with state-of-the-art knowledge in human factors best-practice approaches across different types of industries and energy applications.
