1.	Record Nr.	UNINA9910451475103321
	Titolo	Innate immunity of plants, animals, and humans [[electronic resource] /] / Holger Heine, editor
	Pubbl/distr/stampa	Berlin, : Springer, c2008
	ISBN	3-540-73930-0
	Edizione	[1st ed. 2008.]
	Descrizione fisica	1 online resource (253 p.)
	Collana	Nucleic acids and molecular biology, , 0933-1891 ; ; v. 21
	Altri autori (Persone)	HeineHolger
	Disciplina	616.079
	Soggetti	Immunity Natural immunity Electronic books.
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Description based upon print version of record.
	Nota di bibliografia	Includes bibliographical references and index.
	Nota di contenuto	Evolution of Resistance Genes in Plants The Path Less Explored: Innate Immune Reactions in Cnidarians Bug Versus Bug: Humoral Immune Responses in Drosophila melanogaster Cellular Immune Responses in Drosophila melanogaster Immune Reactions in the Vertebrates' Closest Relatives, the Urochordates Innate Immune System of the Zebrafish, Danio rerio Toll-Like Receptors in the Mammalian Innate Immune System NLRs: a Cytosolic Armory of Microbial Sensors Linked to Human Diseases Antimicrobial Peptides as First-Line Effector Molecules of the Human Innate Immune System The Complement System in Innate Immunity.
	Sommario/riassunto	All living organisms are in a constant battle against their environment. Since uncontained microorganisms would simply overgrow all higher animals, the evolution of multicellular organisms required adequate and efficient defense mechanisms to protect their own integrity and to ensure their own survival. These defense mechanisms, encompassing receptor proteins that sense the presence of pathogens and effector molecules that are involved in controlling them, are the elemental parts of the innate immune system. For many species, the innate immune system is the sole active defense system. Long thought to be an unspecific immune response, the discovery of the Toll-like receptors and their ligands finally revealed just how specific the innate immune response actually is. This book wants to give an overview of our current

knowledge about the innate immune system of plants, animals and humans. It not only covers the innate immune mechanisms and responses of so diverse organisms such as plants, Cnidaria, Drosophila, urochordates and zebrafish, but also the major receptor systems in mammalians and humans as well as the central defense mechanisms, antimicrobial peptides and the complement system.
