1.	Record Nr.	UNINA9910451715203321
	Autore	Neidle Stephen
	Titolo	Cancer drug design and discovery [[electronic resource] /] / Stephen Neidle
	Pubbl/distr/stampa	London, : Academic, c2008
	ISBN	1-281-76368-3
		9786611763688
		0-08-055495-4
	Descrizione fisica	1 online resource (517 p.)
	Disciplina	616.994061
	Soggetti	Antineoplastic agents - Development
		Antineoplastic agents - Design
		Electronic books.
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Description based upon print version of record.
	Nota di bibliografia	Includes bibliographical references and index.
	Nota di contenuto	Front Cover; Cancer Drug Design and Discovery; Copyright Page; Contents; About the editor; Contributors; Introduction; PART I: BASIC PRINCIPLES; Chapter 1 Modern cancer drug discovery: integrating targets, technologies and treatments; 1.1 Introduction: changing times; 1.2 Successes and limitations; 1.3 Integrated small-molecule drug discovery and development; 1.4 New molecular targets: the ""druggable"" cancer genome; 1.5 From drug target to development candidate; 1.6 Examples of case histories for molecularly targeted cancer therapeutics
		1.7 Biomarkers, the pharmacological audit trail and clinical development1.8 Conclusions and outlook: towards individualized molecular cancer medicine; References; Chapter 2 Preclinical pharmacology and in vivo models; 2.1 Introduction; 2.2 Contemporary preclinical cancer drug discovery; 2.3 In vitro pharmacological evaluation; 2.4 Information gained from in vitro cell lines; 2.5 In vivo pharmacokinetics (PK) and pharmacodynamics (PD): continuing the pharmacological audit trail; 2.6 In vivo anti-tumor models: choice and predictiveness?; 2.7 Concluding remarks; References
		Chapter 3 Clinical trial designs for more rapid proof-of-principle and

Sommario/riassunto	The ultimate source of information on the design of new anticancer agents, emphasizing small molecules, this newest work covers recent notable successes resulting from the human genome and cancer genomics projects. These advances have provided information on targets involved in specific cancers that are leading to effective medicines for at least some of the common solid tumors. Unique sections explain the basic underlying principles of cancer drug development and provide a practical introduction to modern methods of drug design. Appealing to a broad audience, this is an excellent reference fo
