

1. Record Nr.	UNINA9910451736703321
Autore	Vasilevski Panaiot
Titolo	Multilevel block factorization preconditioners [[electronic resource] ] : matrix-based analysis and algorithms for solving finite element equations // Panayot S. Vassilevski
Pubbl/distr/stampa	New York, : Springer, 2008
ISBN	1-281-85367-4 9786611853679 0-387-71564-9
Edizione	[1st ed. 2008.]
Descrizione fisica	1 online resource (535 p.)
Disciplina	515.354 530.155353
Soggetti	Differential equations, Linear - Numerical solutions Differential equations, Partial - Numerical solutions Finite element method Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	pt. 1. Motivation for preconditioning -- pt. 2. Block factorization preconditioners -- pt. 3. Appendices.
Sommario/riassunto	This monograph is the first to provide a comprehensive, self-contained and rigorous presentation of some of the most powerful preconditioning methods for solving finite element equations in a common block-matrix factorization framework. Topics covered include the classical incomplete block-factorization preconditioners and the most efficient methods such as the multigrid, algebraic multigrid, and domain decomposition. Additionally, the author discusses preconditioning of saddle-point, nonsymmetric and indefinite problems, as well as preconditioning of certain nonlinear and quadratic constrained minimization problems that typically arise in contact mechanics. The book presents analytical as well as algorithmic aspects. This text can serve as an indispensable reference for researchers, graduate students, and practitioners. It can also be used as a supplementary text for a topics course in preconditioning and/or

multigrid methods at the graduate level.
