Sommario/riassunto

"The contributors first discuss Heckscher's efforts to forge the discipline of economic history by combining both the historian's careful evaluation of sources and the economist's rigorous models. The Heckscher-Ohlin theory of factor proportions is described and tested empirically. Contributors then apply the theory to historical material, including Mediterranean trade in Biblical times, the economic effects of two periods of plague eight centuries apart, and tariff policy in 35 countries from 1870 to 1938. Heckscher's masterly work on mercantilism, the Continental Blockade, and Swedish economic history is also described and appraised in light of recent historical research."-- Jacket.

Nota di contenuto	Foreword -- Preface -- Chapter 1 Introduction to Liquid Crystals -- Chapter 2 Elementary Liquid Crystal Physics -- Chapter 3 Microwave, Millimeter Wave and Terahertz Applications of Liquid Crystal -- Chapter 4 Preparation of Advanced Microwave Nematic Liquid Crystal Materials -- Chapter 5 Measurement of Electromagnetic Properties of Microwave Nematic Liquid Crystal -- Chapter 6 Fabrication of Liquid Crystal Cells for Reconfigurable Microwave, Millimeter Wave and Terahertz Functional Devices -- Chapter 7 Nematic Liquid Crystal Microwave Phase Shifters -- Chapter 8 Frequency Tunable and Pattern Reconfigurable Phased Array Antenna Based on Microwave Nematic Liquid Crystal -- Chapter 9 Digital Metamaterial of Arbitrary Base Based on Voltage Tunable Liquid Crystal.

This book is the first ever monograph on nematic liquid crystals for microwaves, millimeter waves and terahertz waves. It presents the first hand independent studies on nematic liquid crystals for microwaves, millimeter waves and terahertz waves. This book opens with an introduction to generic liquid crystals and a retrospective review about nematic liquid crystals in microwaves, millimeter waves and terahertz waves. Attention is then focused on the latest in-house progress on microwave, millimeter wave and terahertz nematic liquid crystals. Synthesis and characterization of novel nematic liquid crystals are first presented, followed by indigenous technologies to manufacture functional nematic liquid crystal devices for microwaves, millimeter waves and terahertz waves. A few self-developed representative advanced functional devices are shown to demonstrate the promising perspective of liquid crystals for not only microwaves, millimeter waves and terahertz waves but also many other non-display applications. The presented studies will attract scientists, engineers and students from various disciplines, such as materials, chemical, electrical, biological, and biomedical engineering. The book is intended for undergraduates, graduates, researchers, professionals and industrial practitioners who are interested in developing novel liquid crystals and further extending liquid crystals beyond display.
