Sommario/riassunto	Thrombotic disorders of the circulatory system represent the leading

cause of morbidity, mortality, and health care expenditure in the United States. The Second Edition of Fibrinolytic and Antithrombotic Therapy provides a practical, evidence-based approach to the management of thrombotic disorders for all clinicians involved in the care of patients with these disorders. It provides not only vital conceptual information on fibrinolytic and antithrombotic therapy, but also the means to apply it to everyday decision making and patient care. Focusing on management guidelines and critical pathways, the text stresses practicality and usability. It will be a valuable resource for the wide range of clinicians involved in the care of patients with these disorders.

Sommario/riassunto	Video-recordings of families and groups of friends watching the FIFA

men's football World Cup in their homes allow access to the empirical rather than the imagined or inscribed audiences of a major television event. Qualitative analyses reveal how natural audiences behave in the reception situation appropriating live televised football through talk. Gerhardt shows how the mainly English television viewers use an array of linguistic and embodied resources to turn watching football into a meaningful activity in their groups. Cohesive devices and sequentiality link the fans' talk-in-interaction to the televised text (commentary and pictures). Gaze behaviour, pointing, and even jumping up and down are used as resources for a variety of functions like the construction of an identity as football fan.
