| Sommario/riassunto | This book analyzes the recent evolution of the Polish fixedincome securities market, including the money market, the government bond market, and the non-government bond market, focusing in particular on the sub-national bond market. The book examines key policy challenges facing the development of the sector, including policies to: stimulate the development of the classic repo market, increase the reliability of the government bond yield curve, stimulate the overall development of the non-government bond market, and reform the legal and regulatory framework for local government borrowing. |
