Sommario/riassunto	This interdisciplinary and multifaceted work investigates the traumatic character of (late) modernity from the perspectives of risk and trust regarded as correlates to human actions, as well as forms of social consciousness and cultural production in contemporary, post-industrial societies. In this way, the book gestures towards an interpretative framework in which modern social structures and systems may be effectively conceptualised in an overtly phenomenological context that entails the un...

Sommario/riassunto

"The aim of this book is to enable network planners to realize and maintain cost efficient LTE backhaul networks, which meet the necessary performance requirements. Through an introduction to the technology background, the economical modelling, the dimensioning theory, planning and optimization processes and relevant network management aspects, the reader shall obtain all relevant information to

achieve good backhaul results in their own network environment. It is aimed at network planners and other experts with responsibilities for LTE IP network dimensioning, LTE network planning, providing and managing leased lines, business management, LTE IP network operation and optimization. "--
