Sommario/riassunto	In this eagerly anticipated book, Boris Gasparov gazes through the lens of music to find an unusual perspective on Russian cultural and literary history. He discusses six major works of Russian music from the nineteenth and twentieth centuries, showing the interplay of musical texts with their literary and historical sources within the ideological and cultural contexts of their times. Each musical work becomes a tableau representing a moment in Russian history, and together the works form

a coherent story of ideological and aesthetic trends as they evolved in Russia from the time of Pushkin to the rise of totalitarianism in the 1930s. Gasparov discusses Glinka's *Ruslan and Ludmilla* (1842), Mussorgsky's *Boris Godunov* (1871) and *Khovanshchina* (1881), Tchaikovsky's *Eugene Onegin* (1878) and *The Queen of Spades* (1890), and Shostakovich's *Fourth Symphony* (1934). Offering new interpretations to enhance our understanding and appreciation of these important works, Gasparov also demonstrates how Russian music and cultural history illuminate one another.

Sommario/riassunto	The aim of this book is to provide experimental protocols covering many aspects of glycobiology, glycotecchnology, and chemistry: biochemistry, molecular and cellular biology, genetics, physiology, and medicine. The protocols are all self-contained descriptions of the equipment and reagents needed, followed by details of the

experimental procedure. In the post-genomic era, glycobiology is coming of age because more than half of proteins are glycosylated and the importance of sugar chains in various fields of life science research cannot be disregarded. Many scientists had not entered this area because glycobiology and glycoscience used to be considered difficult fields. This book, therefore, is presented much like a cookbook which can help scientists in fields other than glycobiology and glycoscience carry out research more easily.
