| Sommario/riassunto | In the parlance of modern Japanese philosophy, the term Basho denotes a field of experience underlying all conceptions of reality, while remaining itself conceptually ungraspable. The Basho of Economics, then, refers to the economy's hidden experiential ground, which has never been explicitly scrutinized, as such, by mainstream economics. We uncover this ground by discerning the tacit presuppositions of classical and neo-classical theories from the perspective of modern Japanese philosophy. In particular, we draw attention to the traditional atomist assumptions implicit in their equilibrium-theory. |
